CREDIT CARD SUPPLY

 (877) 298 6939

Designed to give an ergonomic and flexible mounting platform for your payment terminal and prevent damage due to the traditional "back and forth" movements with each transaction.

Features

- Manufactured in robust mild steel*
- Durable powder coated finish*
- Smooth 60° tilt and 190° swivel action*
- Dual cable entry options*
- Flange cover to conceal fixing holes*
- Freestanding base plate with rubber feet*
- Stand supplied fully built for a simple install*
- Plate attaches easily to stand with enclosed screws*
- Upgradeable in the field with a simple top plate swap*

FREESTANDING VERSION TO SUIT CLOVER MINI

Installation instructions

- 1. Select the desired position for your payment terminal.*
- 2. Fix the terminal stand to the free standing base plate using the 4 off M5 screws provided*
- 3. Place the full unit on the countertop and choose whether the unit is best swiveling clockwise or anti-clockwise.*
- 4. Position the base plate so that sufficient access can be gained to the terminal by both the customer and vendor when the unit is swiveled through its 190°.*
- 5. If the cables are to be fed through the bottom of the base pole then drill a large hole in the countertop to accept them. This is not necessary if the countertop cable entry is to be used.*
- 6. With the power switched off, feed the cables through the desired base pole entry and up through the top exit of the pole. Ensure that sufficient cable length is fed through the top of the pole to allow connection to the terminal.*
- 7. Connect the cables to the payment terminal.*
- 8. Fit the payment terminal onto the cradle plate and fit the two M6 screws to secure in place as per the adjacent image.*
- 9. Switch on the terminal power supply.*
