

*Designed to allow your terminal
mount to be free standing*

Features

*Manufactured in 3mm mild steel
Durable powder coated finish
Silicone rubber feet
Supplied with fixing screws*

FREE STANDING BASE PLATE-BLACK

Installation instructions

1. Select the desired position for your payment terminal.
2. Fix the terminal stand to the free standing base plate using the 4 off M5 screws provided
3. Place the full unit on the countertop and choose whether the unit is best swivelling clockwise or anti-clockwise.
4. Position the base plate so that sufficient access can be gained to the terminal by both the customer and vendor when the unit is swivelled through it's 190°.
5. If the cables are to be fed through the bottom of the base pole then drill a large hole in the countertop to accept them. This is not necessary if the countertop cable entry is to be used.
6. With the power switched off, feed the cables through the desired base pole entry and up through the top exit of the pole. Ensure that sufficient cable length is fed through the top of the pole to allow connection to the terminal.
7. Connect the cables to the payment terminal.
8. Fit the payment terminal onto the cradle plate and fit the two M6 screws to secure in place as per the adjacent image.
9. Switch on the terminal power supply.
