The 2019 North American for Professional Power Tool Accessories

What the Study Will Cover

With a long history of 25 years, the 2019 Professional Power Tool Accessories Edition will provide a comparison to the previous Editions in 2015, 2011, 2004, 1998 and 1994.

The North American Market for Power Tool Accessories is complementary to the 2016 Professional Power Tool research conducted by the firm that included 19 power tools.

This study will focus upon capturing market back information from a large telephone based survey among professional contractors as well as market size and share data from leading accessory producers. The methodology is divided into two phases and is outlined in the table below.

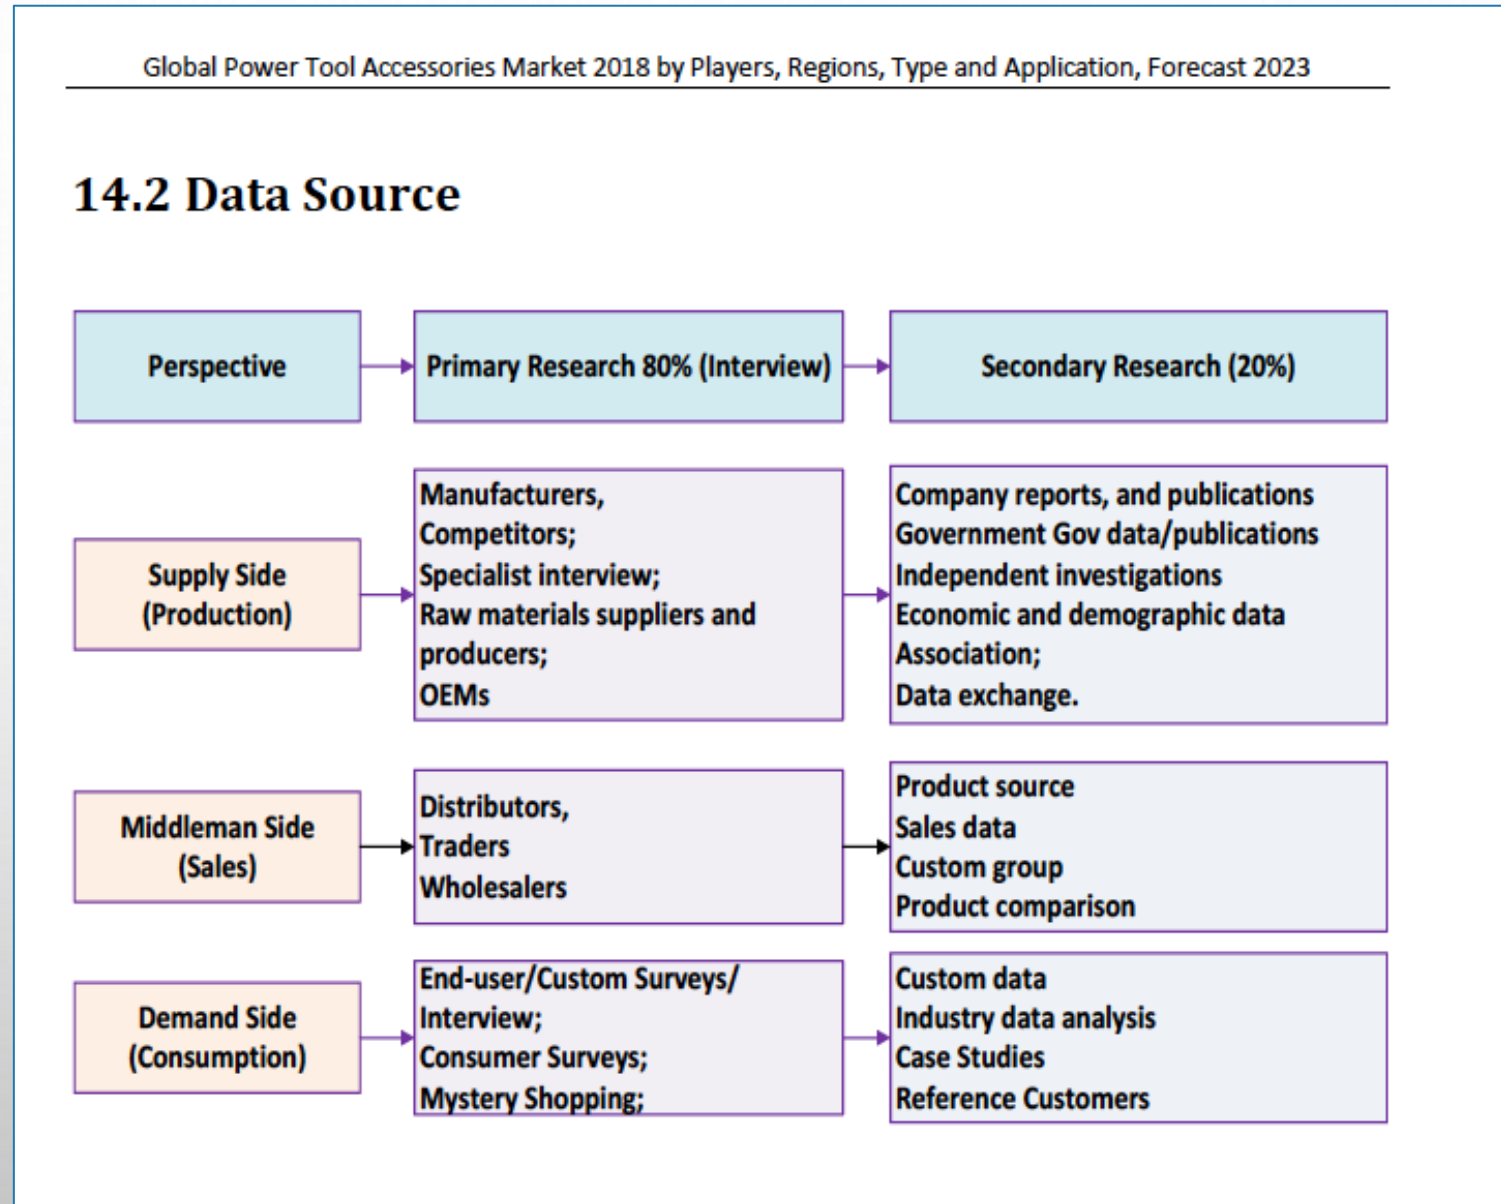

Study Objectives

In order to take advantage of current opportunities in the recovering commercial and residential construction and remodeling marketplace as well as in maintenance repair and overall work, accurate planning data is needed.

Data will be obtained from professional contractors and in-plant industrial maintenance, repair and overall personnel (MRO). Most importantly, information will be obtained using sufficient sample sizes and in such a manner that the data is projectable to the industry as a whole. This is one of the main goals of the study. As a result, it will provide the most comprehensive body of data concerning trends and current planning information on the Professional Power Tool Accessories Market available.
