

Operating Instructions and Parts Manual JBM-5 Benchtop Mortiser

WMH TOOL GROUP, Inc.

2420 Vantage Drive Elgin, Illinois 60124 Ph.: 800-274-6848 www.wmhtoolgroup.com

WARRANTY AND SERVICE

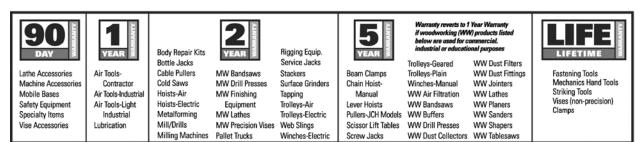

WMH Tool Group, Inc., warrants every product it sells. If one of our tools needs service or repair, one of our Authorized Service Centers located throughout the United States can give you quick service. In most cases, any of these WMH Tool Group Authorized Service Centers can authorize warranty repair, assist you in obtaining parts, or perform routine maintenance and major repair on your JET® tools. For the name of an Authorized Service Center in your area call 1-800-274-6848.

MORE INFORMATION

WMH Tool Group is consistently adding new products to the line. For complete, up-to-date product information, check with your local WMH Tool Group distributor, or visit jettools.com.

WARRANTY

JET products carry a limited warranty which varies in duration based upon the product. (MW = Metalworking, WW = Woodworking)

WHAT IS COVERED?

This warranty covers any defects in workmanship or materials subject to the exceptions stated below. Cutting tools, abrasives and other consumables are excluded from warranty coverage.

WHO IS COVERED?

This warranty covers only the initial purchaser of the product.

WHAT IS THE PERIOD OF COVERAGE?

The general JET warranty lasts for the time period specified in the product literature of each product.

WHAT IS NOT COVERED?

Five Year Warranties do not cover woodworking (WW) products used for commercial, industrial or educational purposes. Woodworking products with Five Year Warranties that are used for commercial, industrial or education purposes revert to a One Year Warranty. This warranty does not cover defects due directly or indirectly to misuse, abuse, negligence or accidents, normal wear-and-tear, improper repair or alterations, or lack of maintenance.

HOW TO GET SERVICE

The product or part must be returned for examination, postage prepaid, to a location designated by us. For the name of the location nearest you, please call 1-800-274-6848.

You must provide proof of initial purchase date and an explanation of the complaint must accompany the merchandise. If our inspection discloses a defect, we will repair or replace the product, or refund the purchase price, at our option.

We will return the repaired product or replacement at our expense unless it is determined by us that there is no defect, or that the defect resulted from causes not within the scope of our warranty in which case we will, at your direction, dispose of or return the product. In the event you choose to have the product returned, you will be responsible for the shipping and handling costs of the return.

HOW STATE LAW APPLIES

This warranty gives you specific legal rights; you may also have other rights which vary from state to state.

LIMITATIONS ON THIS WARRANTY

WMH TOOL GROUP LIMITS ALL IMPLIED WARRANTIES TO THE PERIOD OF THE LIMITED WARRANTY FOR EACH PRODUCT. EXCEPT AS STATED HEREIN, ANY IMPLIED WARRANTIES OR MERCHANTABILITY AND FITNESS ARE EXCLUDED. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG THE IMPLIED WARRANTY LASTS. SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

WMH TOOL GROUP SHALL IN NO EVENT BE LIABLE FOR DEATH, INJURIES TO PERSONS OR PROPERTY, OR FOR INCIDENTAL, CONTINGENT, SPECIAL, OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OF OUR PRODUCTS. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

WMH Tool Group sells through distributors only. The specifications in WMH catalogs are given as general information and are not binding. Members of WMH Tool Group reserve the right to effect at any time, without prior notice, those alterations to parts, fittings, and accessory equipment which they may deem necessary for any reason whatsoever. JET® branded products are not sold in Canada by WMH Tool Group.

For your own safety, read this instruction manual before opering the tool. Wear Eye Protection

- KEEP GUARDS IN PLACE and in order.
- REMOVE ADJUSTING KEYS AND WRENCHES. Form the habit of checking to see that keys and adjusting wrenches
 are removed from the tool before turning it on.
- KEEP THE WORK AREA CLEAN. Cluttered areas and benches invite accidents.
- **DO NOT USE IN A DANGEROUS ENVIRONMENT.** Don't use power tools in damp or wet locations, or expose them to rain. Keep work area well lighted.
- KEEP CHILDREN AWAY. All visitors should be kept safe distance from the work area.
- MAKE THE WORKSHOP KID PROOF with padlocks, master switches, or by removing starter keys.
- DON'T FORCE THE TOOL. It will do the job better and safer at the rate for which it was designed.
- USE THE RIGHT TOOL. Don't force a tool or attachment to do a job for which it was not designed.
- USE THE PROPER EXTENSION CORD. Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersize cord will cause a drop in the line voltage resulting in loss of power and overheating. For runs up to 25 feet, use a 16 AWG or larger gauge cord. For runs up to 50 feet, use a 14 AWG or larger cord. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord.
- **WEAR PROPER APPAREL.** Do not wear loose clothing, gloves, neckties, rings, bracelets, or other jewelry which may get caught in moving parts. Nonslip footwear is recommended. Wear protective hair covering to contain long hair.
- **ALWAYS USE SAFETY GLASSES.** Also use face or dust masks if the cutting operation is dusty. Everyday eyeglasses only have impact resistant lenses, they are NOT safety glasses.
- **SECURE WORK.** Use clamps or a vise to hold the work when its practical. It's safer than using your hand and it frees both hands to operate the tool.
- DON'T OVERREACH. Keep proper footing and balance at all times.
- MAINTAIN TOOLS WITH CARE. Keep tools sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories.
- DISCONNECT TOOLS before servicing; when changing accessories, such as blades, bits cutters, and the like.
- **REDUCE THE RISK OF UNINTENTIONAL STARTING.** Make sure the switch is in the off position before plugging in the machine.
- USE RECOMMENDED ACCESSORIES. Consult the owner's manual for recommended accessories. The use of
 improper accessories may cause a risk of injury.
- NEVER STAND ON A TOOL. Serious injury could occur if the tool is tipped or if the cutting tool is unintentionally contacted.
- CHECK DAMAGED PARTS. Before further use of the tool, a guard or other part that is damaged should be carefully checked to determine that it will operate properly and perform its intended function. Check for alignment of moving parts, binding of moving parts, breakage of parts, mounting, and any other conditions that may affect its operation. A guard or other part that is damaged should be properly repaired or replaced.
- DIRECTION OF FEED. Feed work into a blade or cutter against the direction of rotation of the blade or cutter only.
- **NEVER LEAVE THE TOOL RUNNING UNATTENDED. TURN THE POWER OFF.** Don't leave the tool until it comes to a complete stop.
- **WARNING**: Some dust created by power sanding, sawing, grinding, drilling and other construction activities contains chemicals known to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:
- Lead from lead based paint.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically treated lumber.
- Your risk of exposure varies, depending on how often you do this type of work. To reduce your exposure to these
 chemicals, work in a well-ventilated area and work with approved safety equipment, such as face or dust masks that are
 specifically designed to filter out microscopic particles.

Electrical Requirements

In the event of a malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This tool is equipped with an electric cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into a matching outlet that is properly installed and grounded in accordance with all local codes and ordinances.

Do not modify the plug provided. If it will not fit the outlet, have the proper outlet installed by a qualified electrician.

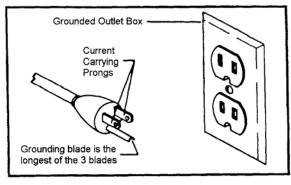

Improper connection of the equipment-grounding conductor can result in a risk of electric shock. The conductor, with insulation having an outer surface that is green with or without yellow stripes, is the equipment-grounding conductor. If repair or replacement of the electric cord or plug is necessary, do not connect the equipment-grounding conductor to a live terminal.

Check with a qualified electrician or service personnel if the grounding instructions are not completely understood, or if in doubt as to whether the tool is properly grounded.

Use only three wire extension cords that have three-prong grounding plugs and three-pole receptacles that accept the tool's plug.*

Repair or replace a damaged or worn cord immediately.

This tool is intended for use on a curcuit that has an outlet that looks like the one illustrated in Figure A below. The tool has a grounding plug that looks like the grounding plug as illustrated in Figure A below. A temporary adapter, which looks like the adapter as illustrated in Figure B below, may be used to connect this plug to a two-hole receptacle, as shown in Figure B if a properly grounded outlet is not available.** The temporary adapter should only be used until a properly grounded outlet can be installed by a qualified electrician. The green colored rigid ear or tab, extending from the adapter, must be connected to a permanent ground suchas a properly grounded outlet box.

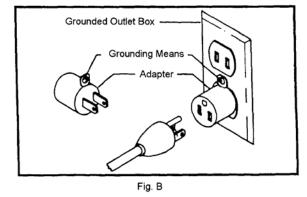

Fig. A

- * Canadian electrical codes require extension cords to be certified SJT type or better.
- ** Use of an adapter in Canada is not acceptable.

Assembly

, WARNING

Never connect the machine to the power source until assembly is completed. Failure to comply may result in serious injury!

- 1. Screw the handle (A, Fig. 2) into the pinion shaft (B, Fig. 2).
- 2. Tighten the handle. The handle has a notch (C, Fig. 2) to accommodate a wrench.
- Use the handle to raise the machine head to the up position. The handle is spring loaded and can be repositioned by pulling the handle away from the machine, and turned to the desired angle.
- 4. With the head in the up position press the hydraulic cylinder onto the two fittings. The upper fitting (D, Fig.2) is located on the head. The lower fitting (E, Fig.2) is on the column.
- 5. Attach the table to the base using two screws (A, Fig.3).
- 6. Insert bar of fence assembly (B, Fig.3) through the hole in the column. Use the fence-locking handle (C, Fig.3) to adjust fence assembly.
- 7. Attach the hold down (D, Fig.3) to the vertical post using locking handle (E, Fig.3).

, WARNING

Make sure the Mortising Machine Is attached to a firm, and stable support surface

This machine must be fastened to a supporting surface to prevent it from tipping during operation. Four holes (A, Fig.4) in the base are supplied for this purpose.

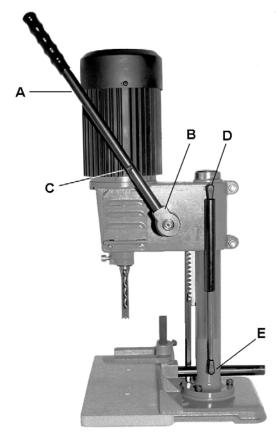

Figure 2

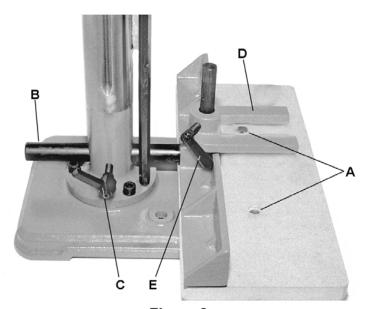

Figure 3

On-Off Switch

The switch (A, Fig. 5) has a switch key that, when pulled out, allows the switch to be locked in the off position.

Handle Adjustment

The handle can be adjusted for leverage and comfort. Pulling the spring loaded handle (A, Fig.6) away from the head and turning allows you to change the position of the handle.

Fence Adjustment

The fence can be moved in and out by loosening the locking handle (B, Fig.4) on the column.

Hold Down Adjustment

The hold down (C, Fig.4) should be adjusted so it just touches the top of the workpiece and allows the workpiece to slide left or right. The hold down can also be taken off and turned over for a thicker workpiece. To adjust the hold down, loosen the locking handle (D, Fig.4).

Depth Stop Rod Adjustment

The depth stop rod (B, Fig. 5) is provided to limit the depth of the chisel cut. Adjust the depth stop rod using the locking handle (C, Fig.5). Lower the head until the bottom of the chisel is at the required depth. Lower the depth stop rod until it is at rest against the base.

180° Head Rotation

Removing the three hex socket cap screws at the base will enable you to rotate the head and column 180°. Doing this will let the user mortise taller items.

Chuck Key Holder

The chuck key holder is located on the left side of the head.

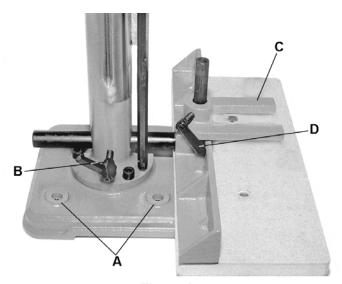

Figure 4

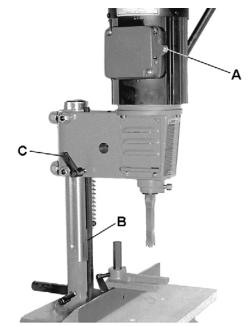

Figure 5

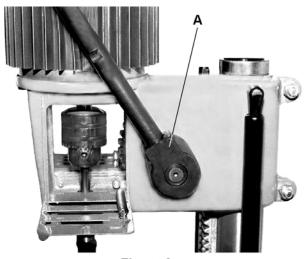

Figure 6

Using Bits with Short Shanks

When using bits with short shanks, it will be necessary to attach the spindle extension. Place an open wrench on the flat part of the motor spindle. Use the chuck key to unscrew and remove the chuck. Attach the spindle extension to the chuck. Replace the chuck with the spindle extension into the motor spindle.

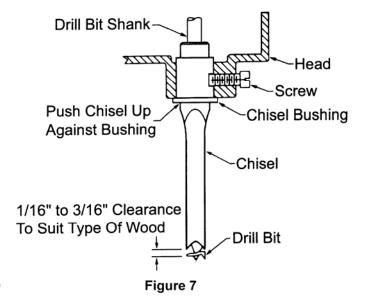

Chisel and Bit Adjustment

See Figure 7

- 1. Insert chisel bushing with hole facing forward into the head. Tighten the screw just enough to hold the chisel in place.
- Insert bit into the chisel. The opening in the chisel should always face to the right or left. The opening allows chips to escape during operation.
- 3. Push the chisel up as far as possible into the head. Then lower the chisel approximately 1/16" 3/16". Tighten the screw to hold chisel in place.
- 4. Push bit up through the chisel opening as far as it will go. Lock the drill bit in place with chuck key.
- 5. Loosen screw and push chisel up against the bushing, and tighten the screw. This should provide the proper distance between the points of the chisel and the bit. Some types of wood may require 3/16" clearance.

Adjusting Chisel Parallel to Workpiece

The chisel can be adjusted parallel to the workpiece by loosening the screw (A, Fig. 8) and rotating the chisel until the back surface of the chisel is flat against the workpiece. Tighten the screw to hold chisel in place.
