

# The A.R.T. of Restoration (Advanced Restoration Techniques)

So, you've spent thousands of dollars on training, certification and equipment. Yet, you still feel like there's something more out there. Well, there is. There is a right and wrong way to do things. There is also more than one right way. But, who's right? Which way is better? Why do my jobs still not dry with predictive certainty? How come I do not make the money cleaning that I should? Why do I not pass all of my verifications? Is there a better way to clean? The answer to all of these questions and more is, YES there is, and Howard knows the answers.

This high energy and extremely enlightening day will highlight both drying and cleaning concepts, methods and processes. The first half of the day will teach you how to become a "Boss" of the indoor environment. You will learn how to predict your drying. Call your shots. Know what the building is doing and why. Know what your equipment is doing and why. And, most important, know what to do about it and the why to explain it.

The second half of the day will showcase both low tech methods, long forgotten but still highly impactful and relevant, as well as, the latest in cleaning technology. You will maximize your knowledge in all of the principles in cleaning. Every project has to be properly cleaned to get paid. So, why doesn't anybody teach it? We do. Learn what you've been missing in your processes and on your line items in your invoices. Be prepared to have your eyes opened to a whole new world of restoration, our world.

## Section 1 Highlights: Advanced Psychrometry Made Simple

- Learn Psychrometry and moisture mechanics the way you should have learned them in your certification courses
- Understand the truth about the why, so you can make good decisions on what, where, when, and most important, how
- Learn the physical sciences behind what we do and why it's important

## Section 2 Highlights: The Science of Drying and Equipment usage

- Learn to become a true "Boss" of the indoor environment. Now that you understand the why, master the what, where, when and, most important, how
- Heat, refrigerant, LGR, desiccant, sub-cool, chillers, direct exchange units. Learn the tools and how and when to use them

## Section 3 Highlights: Next Generation Source Removal and Cleaning Methods

- Learn cleaning methods that were developed in the 1860's and apply them to modern techniques, methods and chemistry
- Containment that makes money
- Dustless demolition techniques that really work and make you money
- High performance methods that make extra money because you can charge more for the method

## Section 4 Highlights: The True A.R.T. of Restore Versus Replace

- Just because you can restore something, should you?
- Learn how to evaluate your scope, establish a tight scope, and get paid for all of it

### The A.R.T. Of Restoration (Advanced Restoration Techniques)

Schedule	Description
