A.3 Scan Status	
Date scan completed:	2018-07-13
Scan expiration date (90 days from date scan completed):	2018-10-13
Compliance status:	Pass
Scan report type:	Full Scan
Number of unique in-scope components scanned:	1
Number of identified failing vulnerabilities:	0
Number of components found by ASV but not scanned because scan customer confirmed they were out of scope:	0

A.4 Scan Customer Attestation	A.5 ASV Attestation
<p>PEOPLEVINE attests on 2018-07-13 that this scan (either by itself or combined with multiple, partial, or failed scans/rescans, as indicated in the above Section A.3, "Scan Status") includes all components which should be in scope for PCI DSS, any component considered out of scope for this scan is properly segmented from my cardholder data environment, and any evidence submitted to the ASV to resolve scan exceptions-including compensating controls if applicable-is accurate and complete. PEOPLEVINE also acknowledges 1) accurate and complete scoping of this external scan is my responsibility, and 2) this scan result only indicates whether or not my scanned systems are compliant with the external vulnerability scan requirement of PCI DSS; this scan result does not represent my overall compliance status with PCI DSS or provide any indication of compliance with other PCI DSS requirements.</p> <div>  <p>Signature</p> <p>CEO</p> </div> <div> <p>Jordan Gilman</p> <p>Printed Name</p> <p>7/13/18</p> <p>Date</p> </div>	<p>This scan and report was prepared and conducted by Trustwave under certificate number 3702-01-12 (2017), 3702-01-11 (2016), 3702-01-10 (2015), 3702-01-09 (2014), 3702-01-08 (2013), 3702-01-07 (2012), 3702-01-06 (2011), 3702-01-05 (2010), according to internal processes that meet PCI DSS Requirement 11.2.2 and the ASV Program Guide.</p> <p>Trustwave attests that the PCI DSS scan process was followed, including a manual or automated Quality Assurance process with customer boarding and scoping practices, review of results for anomalies, and review and correction of 1) disputed or incomplete results, 2) false positives, 3) compensating controls (if applicable), and 4) active scan interference. This report and any exceptions were reviewed by the Trustwave Quality Assurance Process.</p>

Attestation of Scan Compliance

ASV Scan Report Summary

Part 1. Scan Information

Scan Customer Company	PEOPLEVINE	ASV Company	Trustwave Holdings, Inc.
Date Scan Completed	2018-07-13	Scan Expiration Date	2018-10-11

Part 2. Component Compliance Summary

Component (IP Address, domain, etc):	168.62.224.239 - api.peoplevine.com	Pass
--------------------------------------	-------------------------------------	------

Part 3a. Vulnerabilities Noted for Each Component

#	Component	Vulnerabilities Noted per Component	Severity Level	CVSS Score	Compliance Status	Exceptions, False Positives, or Compensating Controls (Noted by the ASV for this vulnerability)
1	168.62.224.239	Discovered HTTP Methods	Info	0.00	Pass	
2	168.62.224.239	Discovered Web Applications	Info	0.00	Pass	
3	168.62.224.239	Discovered Web Directories	Info	0.00	Pass	
4	168.62.224.239	Enumerated Applications	Info	0.00	Pass	Note to scan customer: This vulnerability is not recognized in the National Vulnerability Database.
5	168.62.224.239	Enumerated Hostnames	Info	0.00	Pass	
6	168.62.224.239	Enumerated SSL/TLS Cipher Suites	Info	0.00	Pass	
7	168.62.224.239	HTTP Responses Missing Character Encoding	Info	0.00	Pass	
8	168.62.224.239	SSL-TLS Certificate Information	Info	0.00	Pass	Note to scan customer: This vulnerability is not recognized in the National Vulnerability Database.

ASV Scan Report Summary

#	Component	Vulnerabilities Noted per Component	Severity Level	CVSS Score	Compliance Status	Exceptions, False Positives, or Compensating Controls (Noted by the ASV for this vulnerability)
9	168.62.224.239	URLScan Detected	Info	0.00	Pass	
10	168.62.224.239	Wildcard SSL Certificate Detected	Info	0.00	Pass	

Consolidated Solution/Correction Plan for the above Component:

- Configure the HTTP service(s) running on this host to adhere to information security best practices.
- Restrict access to any files, applications, and/or network services for which there is no business requirement to be publicly accessible.

Part 3b. Special Notes by Component

#	Component	Special Note	Item Noted	Scan customer's description of action taken and declaration that software is either implemented securely or removed
No Special Notes				

Part 3c. Special Notes - Full Text

Note
No Special Notes

Part 4a. Scope Submitted by Scan Customer for Discovery

IP Address/ranges/subnets, domains, URLs, etc.
Domain: api.peoplevine.com

ASV Scan Report Summary

Part 4b. Scan Customer Designated "In-Scope" Components (Scanned)

IP Address/ranges/subnets, domains, URLs, etc.
168.62.224.239

Part 4c. Scan Customer Designated "Out-of-Scope" Components (Not Scanned)

IP Address/ranges/subnets, domains, URLs, etc.
No Data

ASV Scan Report Vulnerability Details

Part 1. Scan Information

Scan Customer Company	PEOPLEVINE	ASV Company	Trustwave Holdings, Inc.
Date Scan Completed	2018-07-13	Scan Expiration Date	2018-10-11

Part 2. Vulnerability Details

The following issues were identified during this scan. Please review all items and address all that items that affect compliance or the security of your system.

In the tables below you can find the following information about each TrustKeeper finding.

- *CVE Number* - The Common Vulnerabilities and Exposure number(s) for the detected vulnerability - an industry standard for cataloging vulnerabilities. A comprehensive list of CVEs can be found at nvd.nist.gov or cve.mitre.org.
- *Vulnerability* - This describes the name of the finding, which usually includes the name of the application or operating system that is vulnerable.
- *CVSS Score* - The Common Vulnerability Scoring System is an open framework for communicating the characteristics and impacts of IT vulnerabilities. Further information can be found at www.first.org/cvss or nvd.nist.gov/cvss.cfm.
- *Severity* - This identifies the risk of the vulnerability. It is closely associated with the CVSS score.
- *Compliance Status* - Findings that are PCI compliance violations are indicated with a Fail status. In order to pass a vulnerability scan, these findings must be addressed. Most findings with a CVSS score of 4 or more, or a Severity of Medium or higher, will have a Fail status. Some exceptions exist, such as DoS vulnerabilities, which are not included in PCI compliance.
- *Details* - TrustKeeper provides the port on which the vulnerability is detected, details about the vulnerability, links to available patches and other specific guidance on actions you can take to address each vulnerability.

For more information on how to read this section and the scoring methodology used, please refer to the appendix.

168.62.224.239						
#	CVE Number	Vulnerability	CVSS Score	Severity	Compliance Status	Details
1		Enumerated Applications	0.00	Info	Pass	Port: tcp/80 The following applications have been enumerated on this device.

ASV Scan Report Vulnerability Details

168.62.224.239						
#	CVE Number	Vulnerability	CVSS Score	Severity	Compliance Status	Details
						CVSSv2: AV:N/AC:L/Au:N/C:N/I:N/A:N Service: http Application: microsoft:iis Evidence: CPE: microsoft:iis URI: / Version: 10.0 Remediation: No remediation is required.
2		Wildcard SSL Certificate Detected	0.00	Info	Pass	Port: tcp/443 An SSL certificate with a wildcarded common name (CN) record (e.g., *.mydomain.com) was detected on this service. CVSSv2: AV:N/AC:L/Au:N/C:N/I:N/A:N Service: http Application: microsoft:iis Evidence: Subject: /OU=Domain Control Validated/CN=*.peoplevine.com Issuer: /C=US/ST=Arizona/L=Scottsdale/O=GoDaddy.com, Inc./OU=http://certs.godaddy.com/repository//CN=Go Daddy Secure Certificate Authority - G2 Certificate Chain Depth: 0 Wildcard Subject Name: *.peoplevine.com

						Remediation: Review your certificate configurations to assure that wildcard certificates are suitable for your application.
3		Enumerated SSL/TLS Cipher Suites	0.00	Info	Pass	Port: tcp/443 The finding reports the SSL cipher suites for each SSL/TLS service version provided by the remote service. This finding does not represent a vulnerability, but is only meant to provide visibility into the behavior and configuration of the remote SSL/TLS service. The information provided as part of this finding includes the SSL version (ex: TLSv1) as well as the name of the cipher suite (ex: RC4-SHA). A cipher suite is a set of cryptographic algorithms that provide authentication, encryption, and message authentication code (MAC) as part of an SSL/TLS negotiation and through the lifetime of the SSL session. It is typical that an SSL service would support multiple cipher suites. A cipher suite can be supported by across multiple SSL/TLS versions, so you should be of no concern to see the same cipher name reported for multiple CVSSv2: AV:N/AC:L/Au:N/C:N/I:N/A:N Service: http Application: microsoft:iis Reference: http://www.openssl.org/docs/apps/ciphers.html Evidence: Cipher Suite: TLSv1_2 : ECDHE-RSA-AES256-GCM-SHA384

						Evidence: URL: https://api.peoplevine.com:443/template/ HTTP Response Code: 403 URL: https://api.peoplevine.com:443/business/ URL: https://api.peoplevine.com:443/cert/ URL: https://api.peoplevine.com:443/company/ HTTP Response Code: 200 URL: https://api.peoplevine.com:443/files/ URL: https://api.peoplevine.com:443/graphics/ URL: https://api.peoplevine.com:443/img/ URL: https://api.peoplevine.com:443/scripts/ Remediation: Review these directories and verify that there is no unintentional content made available to remote users.
12		HTTP Responses Missing Character Encoding	0.00	Info	Pass	Port: tcp/443 During the crawl of the HTTP service, we detected HTML and/or XML documents that were missing any indication of their character set encoding. The server and the pages it serves are responsible for indicating the character set used to encode the documents. Typically, these are indicated within the "Content-type" HTTP header, a 'meta' HTTP-equiv HTML tag, or an XML document encoding header. Without these, some web browsers may attempt to guess the character set encoding of the document by making a guess based on what's available. The danger in this is when browsers guess the incorrect encoding, resulting in a misinterpretation of the document. In cases where a webpage will reflect user-supplied information, an attacker could provide a specially-crafted string that could trick a web browser into decoding the document as a specific character set. If this specially-
